

TERMINOLOGY

Safety Class I

Electrically insulated and earthed. In the event of a basic insulation failure, exposed metal parts that could become live are protected by the earth.

Safety Class II

Live parts are equipped with additional insulation protection such as reinforced or double insulation and do not require an earth.

Safety Class III

Live parts are equipped with additional insulation protection such as reinforced or double insulation and do not require an earth.

**Suitable for mounting on normally flammable surfaces such as wood.
Max surface temp <90°C**

Luminaire is fitted with Electronic control gear

Luminaire can be fitted with an emergency module

Luminaire can be fitted with a dimmable ballast

Ingress Protection

Protection rating against dust and water (See technical information)

Lamp Included

Lamp comes complete with the fitting and does not need to be ordered as a separate item

Lamp not included

Lamp does not come complete with the fitting and has to be ordered as a separate item

Operating Voltage – 230V

Operating Voltage – 12V

Safety Isolating Transformer

Installation on/in furniture allowed

Interference Protection

Electronic components with full interference protection

Dimmable with leading or trailing edge dimmers

Tested to 650°C

Flammability of material tested to 650°C by slow wire test

Adjustment Angle (Tilt)

Rotation Angle

Pull Switch

Energy saving luminaire
