- Fully automatic
- Fully compatible with any DB board or can be installed in the ceiling next to the geyser
- Independently verified tests available
- Fully compliant

**VOLTEX DUAL ELEMENT & DEMAND CONTROL UNIT... THE MOST SIGNIFICANT COMBINATION OF PRODUCTS IN SA**  
Two breakthrough Voltex innovations create an effective system that will help alleviate power interruptions.

The Dual Element saves approximately 14% of the energy used by your geyser.

The Demand Control Unit senses the fluctuation in power supply and automatically turns selected load-draining appliances on and off, preventing spikes in demand and keeping the grid stable.

Please note: Both the Dual Element and the Demand Control Unit must be installed by a qualified electrician.  
Patented numbers: Dual Element – PCT/ZA2006/000033 Demand Control Unit: PCT/ZA2008/00061
